

GOLD PACKAGE

The Road Cycling Gold Package is arguably the finest system available for cycling today, designed to meet all the needs of event administrators—and much more. But while the variety of features is impressive, it's the sheer power these components that truly distinguishes the Gold Package. This dual-camera system boasts two of Lynx's most capable photo finish devices – the **EtherLynx FUSION** as a secondary camera, and the **EtherLynx PRO** for primary capture.

The wireless Fusion camera allows for an unprecedented amount of range and versatility. The Flex option allows the operator to select a range of camera settings, with a maximum of 3,000 fps or 2,700 pixels, your settings can be tailored specifically to the speed, format, and size of your event. But more importantly, these Fusion images are synced with your timer-enabled primary camera for definitive, dual-angle results no matter how close the finish.

The EtherLynx Pro primary camera captures a remarkable 5,000 fps. Like the Fusion camera, the EtherLynx Pro is equipped with a through-the-lens viewer that makes camera set up incredibly easy and precise.

When you add components like the 5-digit reflective display, AirLynx wireless, Photocell Kit, and Time Trial Plug-in, the Road Cycling Gold Package is far-and-away the most powerful everything-you-need packaged solution available for cycling road race results production.

GOLD PACKAGE FEATURES

- Dual-camera setup ensures accurate results by integrating synchronized color images from both sides of the finish-line.
- Built-in wireless connectivity, and the ability to run from a 12 volt DC supply, give incredible freedom in camera location and eliminate the need for complex cabling installations.
- The component-rich gold package covers every cycling need with features like wireless networking, digital display, and powerful FinishLynx software plug-ins.

COMPONENTS

TWO POWERFUL PHOTO FINISH CAMERAS:

- **EtherLynx PRO** – color, timer-enabled, 5,000 fps upgrade, 1GB RAM upgrade
- **EtherLynx FUSION** – color, 3000 fps FLEX option, wireless-enabled.

BOTH CAMERAS COME EQUIPPED WITH:

- Color F-mount (Nikon compatible) through-the-lens alignment viewer and remote iris control
- Nikon-compatible 24-70mm f/2.8 zoom lens
- Super Head Clamp, Geared Mounting Head, and Tripod for precision adjustment

THE GOLD PACKAGE ALSO INCLUDES:

- AirLynx Wireless Gateway
- All-inclusive Camera Cable set with Capture Button and USB-to-Serial Converter
- 9" five-digit Reflective Display
- 10/100 base-8 Port Ethernet Switch
- 15-meter range Single Photocell Kit
- Custom carrying case
- **LynxPad** – Meet management software
- **FinishLynx 32** – Multi-language* photo finish software.
 - Time Trial Plug-in
 - Virtual Photo Eye and Auto-Capture Plug-ins

* See Website for current listing. FinishLynx available in English, Spanish, French, Arabic, German, Italian, Korean, Portuguese (Brazil), Russian, Swedish, Finnish, Chinese (Simp.), Chinese (Trad.), Japanese

TIME TRIAL SOFTWARE

The Gold Package comes complete with Lynx's unique Time Trial software plug in. This makes administration and results production of Time Trial stages fast and easy. With the ability to assign a precise individual start time to every rider, and read and compare net times in the results window, accurate results can be produced quickly and simply. The time trial software can be used with a variety of devices to record start times: a FinishLynx camera, a tape switch, a gate, or a photo cell.

THE LYNX GOLD PACKAGE

The Road Cycling Gold Package is built to be the ultimate solution for cycling event management. Because the system is equipped with the two most powerful Lynx cameras, the Gold Package allows for an unrivaled degree of flexibility throughout varying events, stages, and conditions.

The implementation of the Gold Packaged solution will give you access to images of startling quality and an unprecedented level of timing precision. A regular single camera photo finish system that operates at 2000 fps and 1000 pixels of image height will give you access to 1 million pixels of information every second; however, the two camera Gold Package with the Pro camera operating at 5,000 fps and 1350 pixels AND a Fusion operating at 2,700 fps and 1000 pixels, **will give you access to over 9 million pixels of data every second!** Reading rider numbers and producing accurate results has never been this easy, or this precise.

Not only does the Gold Package contain **all** the components from the Bronze and Silver Packages like full mounting hardware, cable sets and ACM and Time Trial software plug-ins, but there are also several components unique to this elite solution. The EtherLynx Pro camera, AirLynx wireless gateway (for WiFi-enabled Fusion), and a 5-digit digital timing display, allow for complete oversight and control. The Road Cycling Gold Package combines brilliant, dual-angle color images with unlimited real-time image capture to drastically improve the overall ease, accuracy, and efficiency of any cycling event.
